Rundown

Green Forum	
Session 1: Future of Manufacturing - Innovative Sustainable Economy	
<i>Manufacturing remains a critical area in many economies, and the sustainability shift in sector has created new opportunities and challenges to business leaders and policy makers. To ensure relevance in the business world, many companies will have to innovate to remain competitive, and facilitate the transfer of new technology and research into commercial use based on market demand. Following this trend, this session will discuss critical business models for companies in light manufacturing sector, in the new era of carbon emissions awareness and calls for corporate sustainability by consumers. Case studies and latest technologies will be covered.</i>
